Energy & Water: Pitch In and Save

The Mariners' amazing season also finds the Northwest in the grip of its worst drought in more than 20 years. Low reservoirs and soaring electricity costs add up to a tough season for energy and water. But, like the Mariners, if we all pull together we can make 2001 a winning year.

A Northwest conservation team has formed to help you Pitch In and Save Energy and Water. Your complimentary conservation toolkit will help you save energy, water and money - not only this summer, but for years to come.

Saving these precious resources reduces our need for hydropower and our use of water. And that keeps more water in our rivers and streams - for people and salmon.

TEAMWORK

- doing the little things
makes all the difference:

If at least 45,000 people,
everyone at today's game, took a
minute less in the shower, then
more than 52,000 gallons of water
would be saved.

If at least 45,000 fans replaced
5 regular light bulbs with 5
compact fluorescent bulbs it would
save enough energy to power
1,591 Seattle homes for a year.

TEAMWORK

doing the little things makes all the difference...

TIPS:

Energy

Switch to compact fluorescent light bulbs.

They use a fourth of the energy used by regular bulbs.

Set your water heater at 120°.

This setting is comfortable for most uses.

Choose energy efficient appliances and electronics.

When possible, run your washer, dryer and dishwasher after 9 p.m. AND look for the Energy Star label.

Turn down your thermostat.

Make sure you turn down your thermostat when you go to work during the day and when you go to sleep at night.

Weatherize your home.

Seal air leaks around windows, doors and heating ducts. If needed, add insulation to attics, walls and floors.

Money Isn't All You're Saving

Water

Reduce lawn watering.

When and if you start watering your lawn, do it between 7 p.m. and 10 a.m.

Put mulch around your plants.

One less toilet flush a day.

Saves more than 3 million gallons a day in the Seattle metropolitan area.

Spend a minute less in the shower.

Saves more than 2.5 million gallons in the Seattle metropolitan area.

Remember:

- Every drop you save today stays in the reservoir for the summer months.
- Voluntarily saving water today helps us avoid mandatory water curtailment later.

WHAT WILL YOU
SAVE
TODAY?

Check with your energy and water partners for more information and incentives.
